

# SATELLITE EUTELSAT 65 WEST A

## MULTI-MISSION SATELLITE FOR LATIN AMERICA

C-band Downlink Coverage

### EUTELSAT 65 West A opens new markets in Brazil and Latin America

EUTELSAT 65 West A is a tri-band satellite designed to target fast-growing video and broadband markets across Latin America.

Its high-power Ku-band payload enables DTH reception of digital and HD channels across Brazil and facilitates corporate connectivity in Central America, the Caribbean and the Andean region.

The satellite also features a transatlantic C-band coverage for cross-continental video contribution and distribution, in a unique frequency range that is not affected by Brazil's 5G rollout, as well as a Ka-band payload for broadband access across Brazil and Latin America.

A far-reaching antenna seeding programme for Brazilian cable operators is being put in place by Eutelsat to ensure full penetration of the cable head-end market in Brazil. This enables broadcasters to enhance their reach to 12 million homes, and cable operators to enrich their offer via the 65° West video neighbourhood.
